1312	Hall Reconciliation Unit (HRU) - Stewardship Redesign	The Hall Reconciliation Unit (HRU) is current a team managed environment. To address operational challenges with inventory management, file ownership of HRU claims will be tested, along with a reserve unit. The reserve unit addresses some of the common stewardship challenges of overflow calls and absence coverages. The hypothesis: Redesigning HRU will enable greater operational efficiencies, improve claim quality, increase employee engagement, and improve the customer experience.	POST	Approved	In Progress - Testing	Reduce Operating Expense per Claim	8/28/2023	3/31/2024	Support Initiative: Work Segmentation Workstream: Other Horizontal Claims Consideration: Weather & Catastrophe Claim Services (WCCS) Deployed, Fire-In-Office, Fire-Proximity Other Organizational Impacts: Enterprise Technology, Forecasting & Scheduling, Org/AA, Telephony Job Role Impacts: N Recommended Owning Area: POST/CPE VPO Sponsor(s): Tyrone Smith Comments: Owning area dependent on timeline and capacity restraints. Could be owned by CPE or POST. Might be a good fit with other Fire Redesign work, but resources and sequencing will be a factor if picked up by CPE. Following up with Mike K. to determine how this compares in	12/23/23. Data gathering and analysis in progress to complete recommendation. Sponsor meeting scheduled for 1/12/24 to review final recommendation. Staying connected with Fire Design work for timing and next steps as pertains to Reconciliation Unit design. 12/7/2023 CM: Test remains in progress, planned to end 12/23/2023. Data analysis in progress to inform recommendation and next steps. 11/2/2023 CM: Test is In progress, expected to last 90 days, ending approximately 12/24/2023. Results are being monitored and communicated to stakeholders weekly, improvements to claim closing, task completion, and DID answered trends are being seen initially. A two-week pause on incoming new claims to the test participants was implemented to address the Initial influx of reassigned claims, which was ~4,200 vs. the projected ~3,700. 10/2/2023 CM: Test launched on 9/23 with 6	7/31/2023	6/27/2023 11:42	On Track
