Re: Atlas Pinnacle and StormMaster Shake Product Changes

Effective July 2, 2013, with regular production of the Pinnacle Pristine Lifetime and StormMaster Shake Lifetime asphalt shingles manufactured in the Daingerfield Texas and Meridian, MS plants – product changes have been effected in both the dimensional size and the surfacing granules placement.

- The former overall shingle dimensions of both the Pinnacle 35 and the StormMaster Shake were 38- 1/4" x 13-1'8".
- The revised and current Pinnacle Pristine and StormMaster Shake regular production is now 39-3/8" W x 14" H.
- The new format provides for a 6" weather exposure compared to the former 5 -5/8" weather exposure. Installing the current 6" exposure version at the 5-5/8" exposure will compromise the wind performance and product warranty.
- These dimensional differences do not allow for installations where both old and new shingles are to be installed on a common roof deck.
- The granule placement and pattern was also changed slightly to enhance the esthetics and will not match well if installed side by side or on the same structure.
