RE: Pinnacle Pristine Lifetime shingle dimension changes:

The following Pinnacle design changes have been made since 2013:

- Effective July 1, 2013, the Pinnacle Pristine Lifetime shingle dimensions and design changed and was replaced by the new **Pinnacle Pristine featuring HP Technology**. This created a “Do Not Mix” scenario with the previous Pinnacle Pristine shingle.
 - The **Pinnacle Pristine shingle featuring HP Technology** features a larger 6” weather exposure (from 5 5/8”), dual “Sweet Spot” sealant lines which define the nailing area and the overall dimension change of the shingle to 14” x 39 3/8”.
- Atlas has since, in 2017, made an additional product improvement to the Pinnacle Pristine HP. This latest improvement is only in the length of the shingle. We have increased the length from 14” x 39 3/8” to 14” x 42” dimensionally. All other features remain the same as the Previous Pinnacle Pristine featuring HP Technology shingle.

Atlas no longer offers a laminate shingle with a 5 5/8” exposure nor a laminate that is 39 3/8” in length. The new **Pinnacle Pristine HP42** Technology shingle cannot be installed on the same plain of the roof or used to replace damaged shingles of the same brand name unless they are of the same exposure.

Atlas does not recommend any alterations to existing or new shingles intended to match or replace existing shingles on the roof. These alterations will void the single warranty.

Sincerely,

Paul Casseri
